

# Water Supply Update

## If it Rains *and if it Doesn't*

Early winter storms meant the watershed was primed to absorb additional rain. However, January, February and March, normally the wettest months, were extremely dry.

*A series of early winter storms primed the watershed for maximum inflow to the lake. By contrast, small, light rain events resulted in little to no runoff.*

November

February

December

March

January

April

*Years of strategic investment in a robust and diverse water supply portfolio combined with exceptional conservation by customers means the Goleta Valley is well positioned whatever the weather brings.*
